

Kune - Enhancement #190

More representative "browser window title" of Kune spaces

02/13/2012 09:52 PM - Anonymous

Description			
Depending on which space I am located, the browser tab (or window) is named in a different way:			
<ul style="list-style-type: none">- "Home" in Home- "Inbox" in User Space- "samer:documents" in Group Space- "samer:documents" in Public Space- "(1 conversation unread)" blinking, if a chat was received			
Those names are not really representative, as they don't provide a name of the actual "Kune" I'm using. Besides, Group Space and Public Space have identical names. I'd change them to (replace Eurosur by Kune.cc or equivalent):			
<ul style="list-style-type: none">- "Eurosur Home" in Home- "Eurosur Inbox" in User Space- "Eurosur samer:documents" in Group Space- "Eurosur samer:documents (preview)" in Public Space- "(1 chat unread)" blinking, if a chat was received
