Kune - Enhancement #190

More representative "browser window title" of Kune spaces

Description

Depending on which space I am located, the browser tab (or window) is named in a different way:

- "Home" in Home
- "Inbox" in User Space
- "samer:documents" in Group Space
- "samer:documents" in Public Space
- "(1 conversation unread)" blinking, if a chat was received

Those names are not really representative, as they don't provide a name of the actual "Kune" I'm using. Besides, Group Space and Public Space have identical names. I'd change them to (replace Eurosur by Kune.cc or equivalent):

- "Eurosur Home" in Home
- "Eurosur Inbox" in User Space
- "Eurosur samer:documents" in Group Space
- "Eurosur samer:documents (preview)" in Public Space
- "(1 chat unread)" blinking, if a chat was received
