

Kune - Enhancement #515

Add a "mark all as read" button in the wave

Description			
When you join to a old wave, all messages at him become notifications. We need to change this behavior or add a option to bulk mark this bits as read.			

History

There is already a button with the behaviour "mark all blips as read in this wave". Within a wave, right under the list of participants of the wave, there are several buttons. One is "Read". This should work for this issue, right? Notice there is a small bug with that button (<http://redmine.ourproject.org/issues/516>).

The default behaviour upon joining should be NOT to mark them as unread. Cause before deciding to join to write something, the responsible user first reads the wave to make sure it hasn't already been written. For the rare case of the user who decides to join a wave before reading it, the button "Unread" is there.
